

Few other hazards or behaviour comes close to claiming as many teen lives as driving. Involved, informed parents have long been considered the most influential factor in promoting safe teen driving. The mission of Teen Driving is to help communities develop a parent education program, so that parents can guide their children through the first perilous years of driving.

Many schools too wish to offer support but have little knowledge of what should be done. Driving Skills for Life makes itself available to present at meetings information about licensing procedures, current driving techniques, procedures for helping teach their children to drive, curfew restrictions, and more.

A kit with step-by-step information about how communities can start their own programs is available. For interested communities request more information from Driving Skills for Life.

Quality driver education and training for teens, that imparts both responsible attitudes and safe, defensive driving techniques is our mission. Teen driving is a leading cause of fatal injury among our nation's youth. Our teen driver program is designed to emphasize the attitudes that insure the safety of young drivers. Our goal is to provide a comprehensive teen drivers education and training course that will change these grim statistics and to do that at a reasonable price. We are dedicated to providing the very best driving instruction for teens whether you choose drivers education in the classroom, or our in-car driver training for your teens.

Classroom instruction is taught by professional instructors, who are dedicated to imparting road safety to today's youth, through discussion, video presentations and creative teaching methods.

The in-car training instructors are licensed, highly qualified, professional trainers, who are committed to imparting respect for other motorists, as well as, defensive driving skills.
